

COMPOMAC

STORABLE READY TO USE
COLD ASPHALT MIX

Our bespoke solution for road maintenance

Easy to use, durable, storable, etc.

Compomac is a dense cold asphalt mix. For many years now, it has been a product of choice for all small-scale road maintenance work, be it recurrent or localized.

WE OPEN THE WAY

COMPOMAC

STORABLE READY TO USE
COLD ASPHALT MIX

Packaged in buckets, Compomac asphalt is ready to use, easy to apply, dense and resistant, making it the ideal solution for regular small-scale road maintenance work:

- filling potholes;
- repairing trenches;
- repairing valve boxes and manholes;
- finishing pavements, paths, alleys, etc.

Compomac is obtained through an exclusive separate double-coating process using sand and gravel. It is denser and more cohesive than conventional asphalt emulsions. It delivers greater mechanical resistance, water resistance and durability.

Compomac is economical and environmentally friendly. It is manufactured locally, applied cold and produces neither dust nor fumes.

ADVANTAGES

- Packaged in 25 kg buckets
- Can be stored and used for up to 18 months
- Can be reused after opening
- Excellent workability
- Fast and easy to use
- Can be compacted manually or mechanically
- Once compacted, traffic can resume immediately
- Easy to ship and transport
- Available in several colors

Black
